

**burley**  **Fireball™**

The world's most efficient  
wood burning stove

has the option of a

## **Multi Fuel Grate**

There is now a very easy to install multi fuel grate option for Burley's *Fireball* wood burning stoves.

The two piece cast iron grate simply fits inside the existing stove to provide a base and the correct air flow for burning coal. The centre of the casting can be removed to allow easy access for ash removal.

The multi fuel grate can be selected at time of purchase or can be retrofitted to an existing Burley wood burning stove.

Wood is still of course the most efficient and environmentally friendly fuel to use.
